ULTIMATE BOTS

Getting Access to Competition Robots

A guide for teams · IEEE Humanoids 2026 Competition · Santa Clara, CA · December 6–9, 2026

You don't need to bring your own robot to compete. Ultimate Bots — the humanoid robot sports league — provides and operates humanoid robots (Unitree and AgiBot platforms) at the Humanoids 2026 competition. If you have a policy or a full software stack, our engineers will help you deploy it on our hardware and support you through the event.

THREE WAYS TO GET ROBOT TIME

At the competition

Robots on site with backup units, operated by Ultimate Bots engineers. Verified teams get scheduled runs on competition days.

Remotely, before the event

Send us your code and our engineers deploy and test it on real hardware — then iterate with you until it's verified. Strongly recommended: pre-verified code means far higher success rates on the day.

In our labs

Hands-on integration time at our San Francisco and Los Angeles labs, by appointment — work directly with our team on your deployment.

THE PROCESS

1. **Register interest.** Fill out the competition's expression-of-interest form (via the Humanoids 2026 site) and indicate you'd like to use the provided robots. Final participation is confirmed with your team description paper in October.
2. **Reach out to us.** Email us or join our Discord — the fastest path. Moderators will guide you through onboarding, and you'll be in a community of like-minded humanoid developers, with announcements, a help desk, and office hours.
3. **Tell us about your stack.** Which platform you're targeting and what you're bringing — a trained policy or a full stack. Integration runs through the robots' open-source APIs; deeper customization (e.g. custom control boards) is handled case by case with our engineers.
4. **Verify your code remotely.** Schedule remote test sessions with our team. Plan to have your code ready in November — exact dates will be announced with the competition organizers — so your deployment is verified before you travel.
5. **Compete.** Show up, run your verified stack on our robots, and focus on the tasks — we handle the hardware.
